

Wowd Fact Sheet

Overview: Wowd is a new, real-time search engine for discovering what's popular on the web right now.

Wowd achieves both real-time results and comprehensive coverage. Wowd uncovers information seconds after it appears on the web. Unlike other search engines, Wowd covers the entire web – any publically available page, from any web site, anywhere, can potentially be included in the Wowd index.

Wowd delivers search results that real people find interesting. This is accomplished by taking into account pages preferred by people. Wowd doesn't rely on web crawlers or conventional page ranking. Instead, Wowd leverages a distributed cloud architecture.

Wowd's Hot List of popular web pages makes it easy to discover the latest trends, news, and hot topics around the web.

Features: Wowd delivers popular and timely information in three ways:

1. Wowd displays a real-time "Hot List" of popular web pages that updates live before your eyes.
2. Wowd makes it easy to search and sort search results according to popularity or freshness. Plus, with one click, Wowd can send those pages to your Facebook, Twitter or email account.
3. Wowd offers the ability to do full text search of any public web page you have visited before, making it extremely easy to find that page again.
